

# THE DEVOPS DIFFERENCE

(where culture and technology intersect)

## Removing the barriers to innovation

Demand from customers for consistent application enhancement and optimal system performance is constantly increasing. One of the biggest obstacles along the path to meeting these demands is the siloed teams of development and IT operations. That's why it's more important than ever to adopt a collaborative DevOps approach that fosters the speed and innovation required to respond faster to market opportunities and end user requirements.

## Enable collaboration that accelerates the business

Leveraging a customized DevOps approach enables a continuous integration and delivery culture to accelerate the deployment of new applications and services. With real-world expertise, Veristor can help you implement technology solutions and best practices that will yield agility, functionality, and innovation to speed time to market and outpace the competition.

Integrate a custom DevOps approach and unlock your organization's full potential.

# REAL-WORLD DEVOPS SOLUTIONS AND SERVICES

Working strategically at the intersection of development and IT operations

## IT Automation

Provides a single language for best practices across DevOps along with agentless automation. This streamlines development, deployment, and support processes, while optimizing application performance.

## Infrastructure as Code (IaC)

Enables you to utilize any code editor, check code into version control, and review files before deployment so you can codify your IT infrastructure to automate development, deployment, and support.

## Automated Testing

Allows you to build out, organize, kick off, and re-use automated test execution suites. You can also tap into detailed reports to track test results and pinpoint application defects.

## Microservices & Containers

Streamlines complex application updates by accelerating the development of hundreds of containers composed as a single application.

## Custom Development and Integrations

Quick evaluations from our experts to identify your needs and choose the right toolset to develop fast, scalable software solutions that are tailor made for your business.

## End-to-End DevOps Planning

Delivers a comprehensive range of planning services such as readiness assessments and transformation gap analysis evaluations. This helps identify existing cultural, process, and technology gaps and outline a practical action plan with prioritized recommendations.

## Continuous Integration/ Continuous Deployment (or Delivery)

Makes it easy to code, manage, and collaborate with distributed version control and continuous release management. It also gives the ability to track tasks through current, real-time visual data.

## Cultural Realignment

Establishes a collaborative culture that learns together and changes together. This turns big business goals into smaller, more manageable pieces of work that the team can be successful at delivering.
