LABS

Migrate to Atlassian Cloud with Confidence

Forty8Fifty Labs has developed a proven process and methodology for migrating to Atlassian Cloud with seamless efficiency. As an Atlassian Enterprise Platinum Solution Partner, we'll help you along your cloud migration journey with best practices to assess, plan and execute your cloud migration while minimizing business impact. Make the move with confidence, utilizing a established approach that will accelerate your journey to the cloud.

MIGRATION ASSESSMENTS

Reduce Migration Risk with Proven Project Scoping.

At Forty8Fifty Labs, we have instituted an iterative approach to our migration services by decoupling the assessment from the migration. By offering assessments separate from migration services we reduce the risk of improperly scoping your migration effort, identifying potential obstacles, pinpointing decision criteria and setting clear expectations so migrations are more concise and accurate - day one.

MIGRATION PLANNING

Better Understand Your Automated Tools.

Automated migration tools from Atlassian can make your journey easier, but they won't completely replace manual efforts. Forty8Fifty Labs' migration planning services will help you know what items automated tools will and won't address, so you can plan your move with the visibility needed for success.

MIGRATION TESTING

Test Before Production Environments are Impacted.

Forty8Fifty Labs will expertly test your migration in a non-production environment so that unexpected errors don't impact the instances that power your business. We'll create a cloud test environment that is insulated from your production platform to ensure that your Atlassian stack is operating flawlessly prior to cutover.

MIGRATION AUDITING

Know Your Data Before its Moved.

At Forty8Fifty Labs we'll dig into your data with a rigorous auditing process to help you better understand its value. With a thorough examination of data that is in your on-prem environment, you can better understand what should be moved, kept in place or archived to make your migration more clean and efficient.

THIRD-PARTY APP ASSESSMENTS

Validate App Usefulness Before You Migrate.

Not all third-party apps used for your on-prem environment should move to the cloud. They may overlap with other apps, aren't fully supported in the cloud or simply aren't being used. Forty8Fifty Labs will help you analyze and prioritize your apps so you can optimize your cloud utilization and make the most of your cloud instance.

CLOUD READINESS TRAINING AND CONSULTING

Empower Your Team to Operate Effectively in the Cloud.

Moving to Atlassian Cloud means life may be a bit different for your teams. While Atlassian instances in the cloud deliver greater simplicity, economy and flexibility, they can also behave a bit differently than when on-prem. From the API set to server maintenance to log access capabilities, Forty8Fifty Labs will help ensure your staff is ready to operate with success in the cloud.

ABOUT US

Forty8Fifty Labs is an expert in designing agile collaboration, lean IT Service Management (ITSM), and DevOps solutions that empower teams to innovate and operate at the velocity of business. We work to help organizations team better across silos, deliver software faster, secure environments more reliably, and migrate development to the cloud with confidence. Leveraging over 16 years of engagements with more than 1,000 mid-size and enterprise customers, Forty8Fifty Labs is the go-to resource for cross-team software innovation.

At Forty8Fifty Labs we help you team better, deliver faster, and secure earlier across your complete development lifecycle. Let's start a conversation to accelerate your business innovation.
